Lights That Make Dream

Paris-based Ozone Light is a leader of innovation using minimal designs, cutting edge materials and the latest technology.

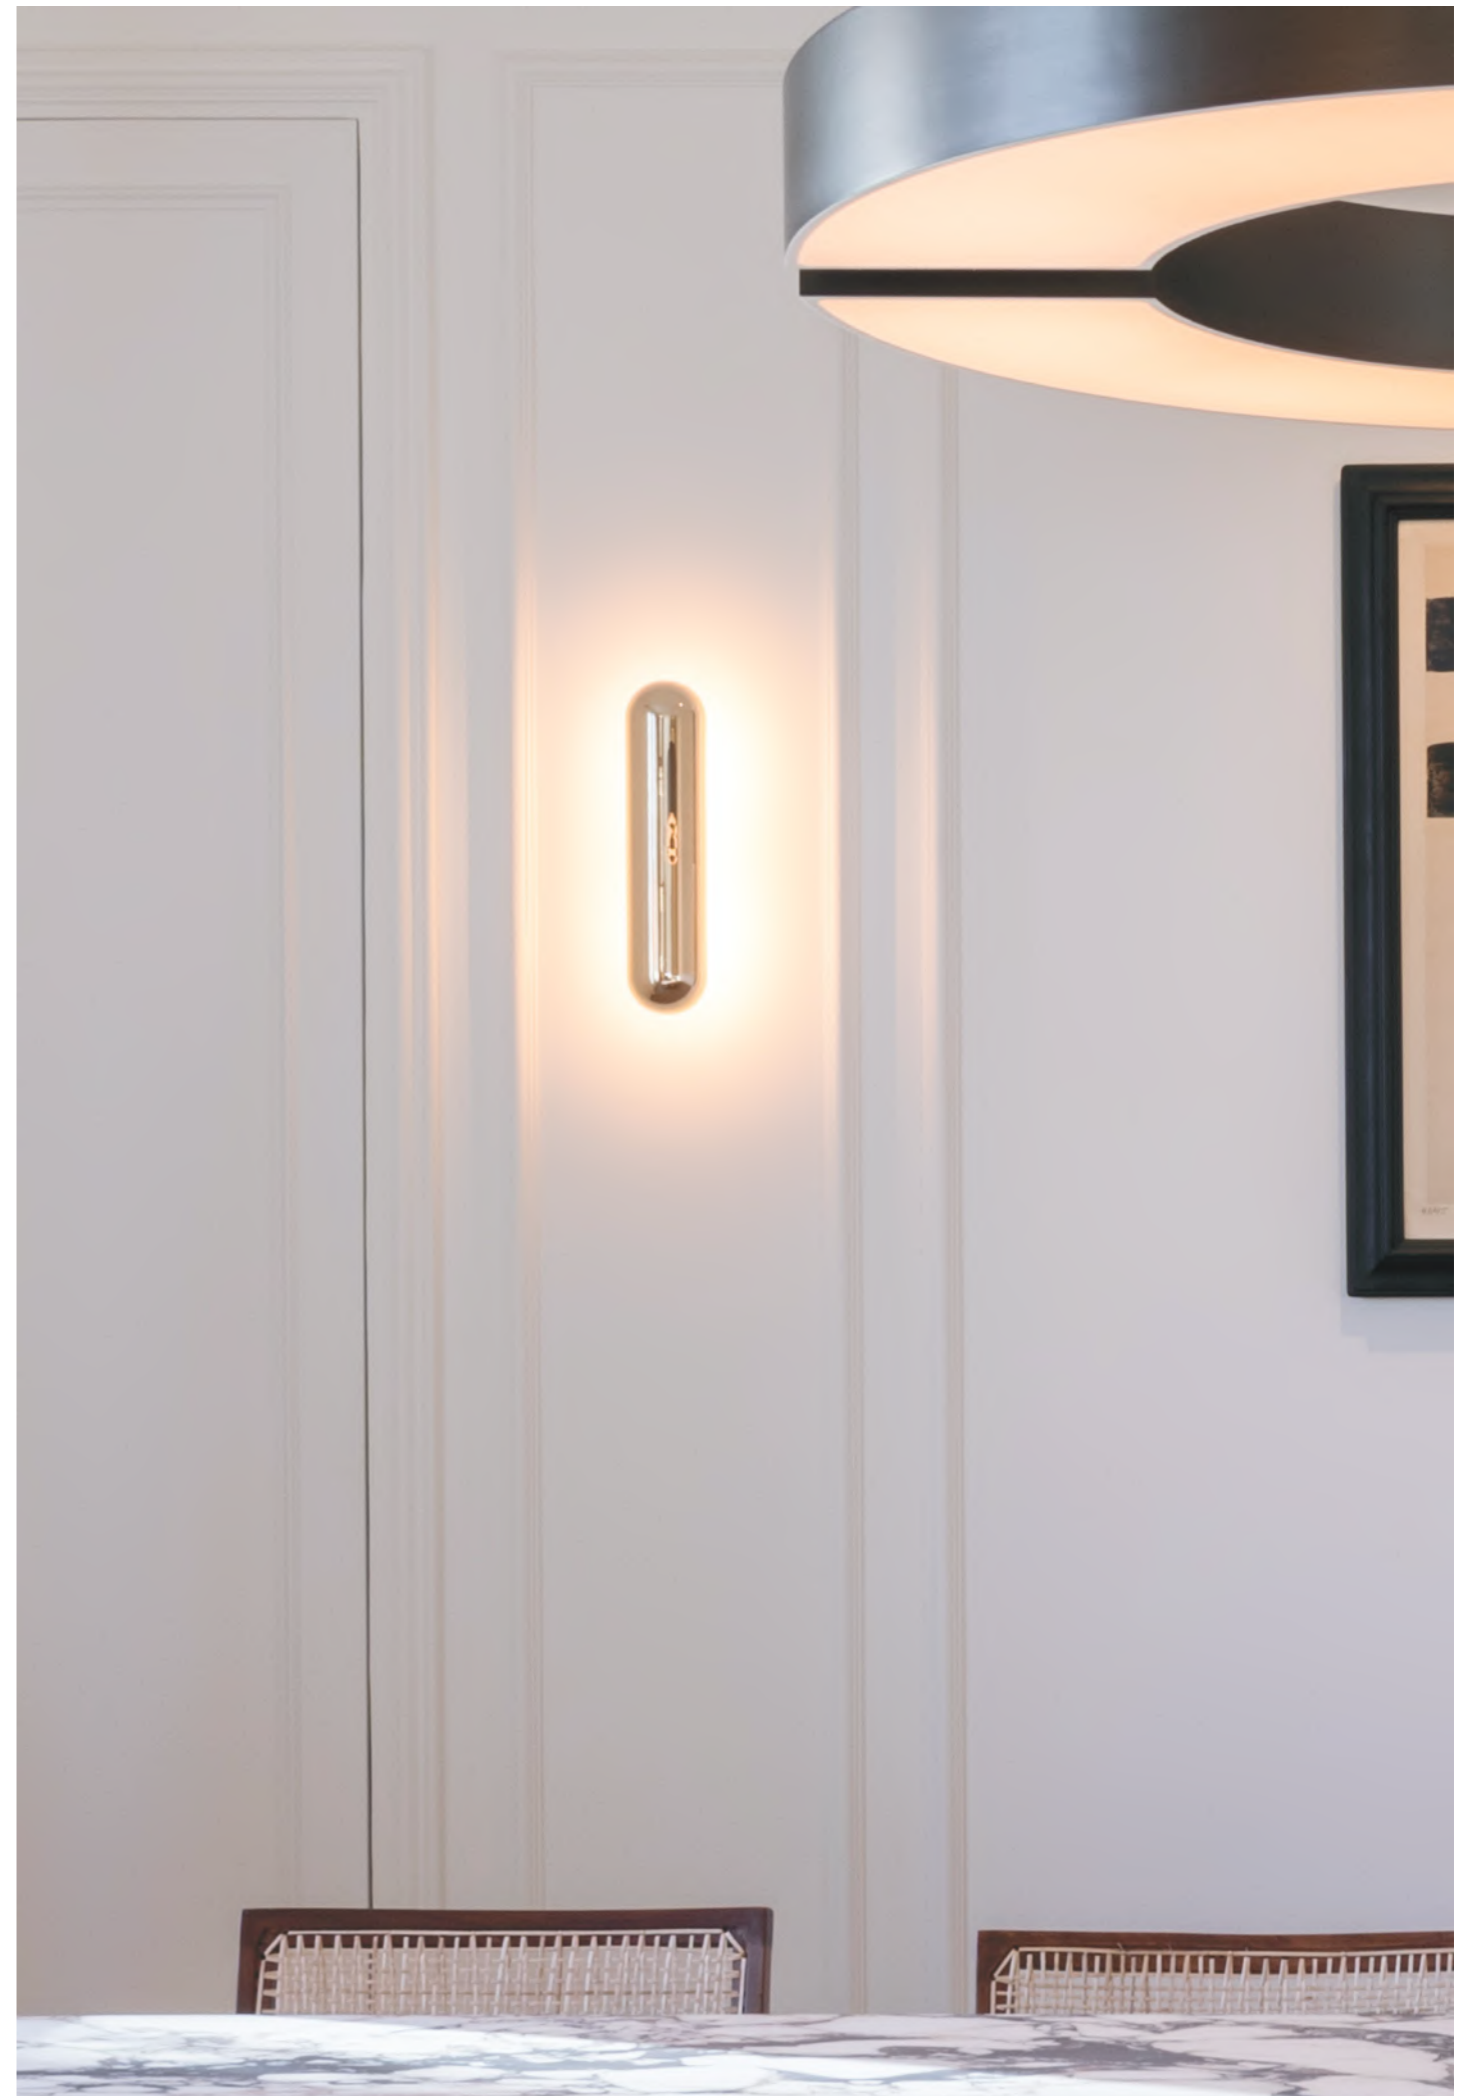

The Story of a Friendship

Etienne Gounot and Eric Jahnke, both industrial engineers, met at 25, whilst working in an office. Both passionate about design they started creating lighting fixtures from Etienne's apartment, and in 2000 they founded Ozone. Their idea is to be as close as possible to natural light whilst creating very striking, eye-catching pieces.

Combining Technology and Architecture

Gounot and Jahnke masterfully merge the Parisian tradition of craftsmanship with the latest LED light technologies. The clean lines of their designs conjure timeless geometries – tubes, cubes, bubbles, and circles define their pieces, each executed as exquisitely as the artist's paintings.

A Renewed French Craftsmanship Tradition

The assemblage details, metal finishes and lighting performance of each piece are of the highest level. All light fixtures are manufactured and assembled in Ozone's workshop located in the heart of Paris.

Design World's Go-To Lighting

Now Ozone is worldwide known for its outstanding, dramatic designs and has become the go-to place for major architects. Ozone has opened their collection which now includes models designed by Michel Boyer, Jean-Michel Wilmotte, Joseph Dirand, Pierre Paulin, Régis Botta and Glenn Sestig.

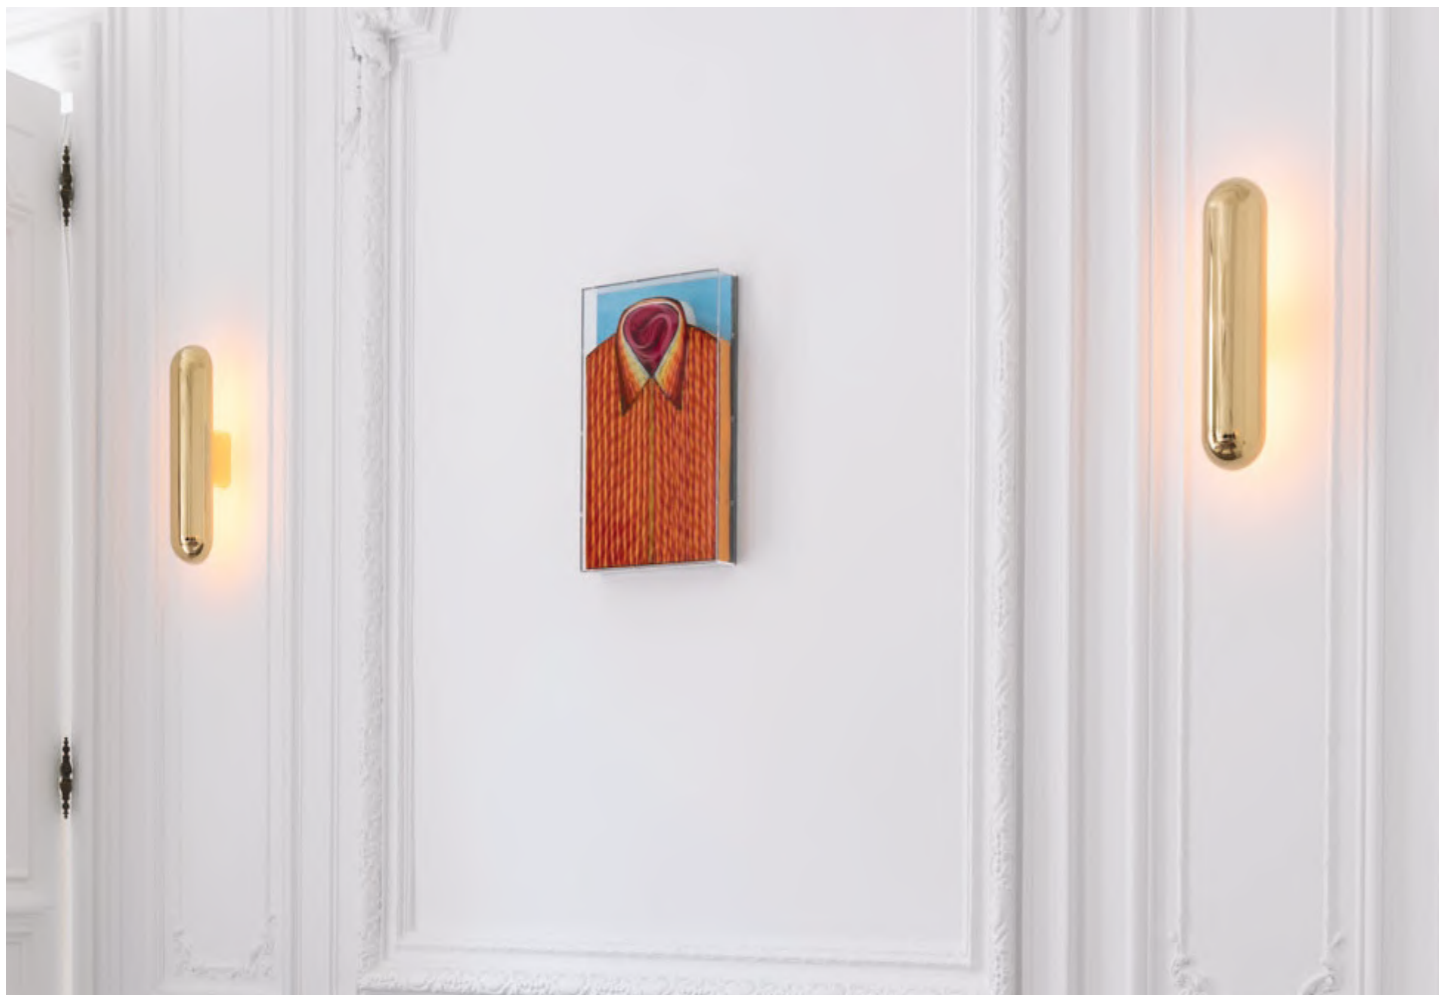

Innovative Spirit

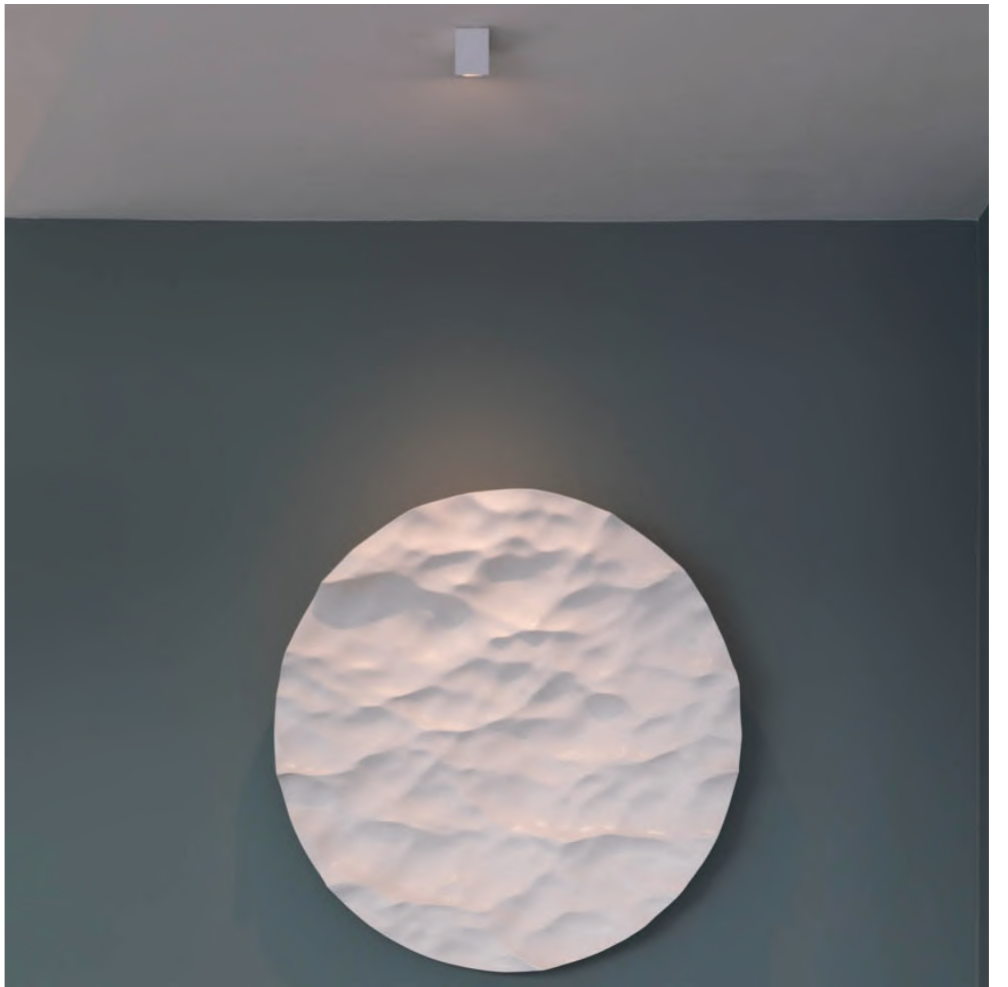

Always on the lookout for the latest technologies, Ozone never stops experimenting with new materials bringing lighting fixtures to a new, fascinating level.
